Application Timing	Rate (pt/A)	Use Directions
Fall Application for Spring Weed Control For use in the following states: Iowa Illinois Minnesota Nebraska North Dakota South Dakota Wisconsin	For minimum-till or no-tillage systems on soils with $\geq 2.5\%$ organic matter, apply rate based on soil texture: <i>Medium Soils:</i> Apply 1.67-2.0 pt/A <i>Fine Soils:</i> Apply 2.0 pt/A	Apply after harvest when the sustained soil temperature at a 4-inch depth is less than 55° F and falling. Apply to ground that will be planted to soybeans the next spring and time application according to the following geographic schedule: Apply after September 30 in ND, SD, MN, WI and north of Route 30 in IA. Apply after October 15 North of Route 91 in NE and south of Route 30 in IA. Apply after October 31 North of Route 136 in IL. When fall and/or a spring tillage follows application, avoid incorporating to a depth greater than 2-3 inches. Minimize furrow and ridge formation in the tillage operations.
Fall Application for Residual Control of Glyphosate Resistant Italian Ryegrass	1.33 – 1.67 pt/A Use the lower rate for <i>coarse textured soils</i> and the higher rate for <i>fine textured soils</i> .	Apply after harvest of the previous crop and prior to Italian ryegrass emergence. If tillage follows application, avoid incorporating to a depth greater than 2-3 inches. After emergence of glyphosate resistant Italian ryegrass, a Gramoxone brand herbicide can be tank-mixed with Dual Magnum to control emerged ryegrass.
Preplant Surface Application	Apply Dual Magnum at rates below for the soil texture: <i>Coarse Soils:</i> 1.33 pt/A <i>Medium Soils:</i> 1.67 pt/A <i>Fine Soils:</i> 2.0 pt/A For extended residual or control of heavy weed infestations, up to 2.6 pt/A is allowed.	Apply up to 14 days prior to planting on coarse soils. Apply up to 30 days before planting on medium or fine soils.
