

**RESTRICTED USE PESTICIDE
DUE TO HIGH ACUTE TOXICITY TO HUMANS**

For retail sale and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator's certification. Direct supervision for this product requires the certified applicator to review federal and supplemental label instructions with all personnel prior to application, mixing, loading or repair or cleaning of application equipment.

2(ee) Recommendation

Use information in accordance with Section 2(ee) of FIFRA

DUPONT™ LANNATE® LV INSECTICIDE

EPA Reg. No. 352-384

FOR USE ON FIELD CORN AND SOYBEANS FOR THE CONTROL OF SLUGS IN THE STATES OF DELAWARE, ILLINOIS, INDIANA, KENTUCKY, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, PENNSYLVANIA, VIRGINIA, AND WEST VIRGINIA

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in any way that will contact workers or other persons; either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe; consult the agency responsible for pesticide regulation. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

DuPont™ LANNATE® LV can be applied at 1.5 pt/acre when slug populations reach locally determined economic thresholds. Consult the cooperative extension service, professional consultants or other qualified authorities to determine appropriate threshold levels for treatment in your area.

APPLICATION

Start applications to corn when the corn reaches the 2 leaf stage. Start applications to soybean when the soybeans reach the first trifoliolate stage. Use of an adjuvant will improve coverage and performance.

Slugs primarily feed in the early evening, at night or in cool, early morning hours. Slugs are most active when weather conditions are moist and cool. It is recommended to make applications in the late afternoon through early morning or whenever slugs are actively feeding.

LANNATE® LV should be applied at 5 to 7 day intervals to maintain control. Use sufficient water to obtain thorough, uniform coverage. Since LANNATE® LV is a fast acting contact insecticide, best results follow direct spraying of the target insect.

NOTE:

For Field Corn:

Do not apply LANNATE® LV within 21 days of harvest in field corn.

Do not apply more than 2.25 pounds of methomyl (7.5 pints of LANNATE® LV) per acre per growing season.

Do not make more than a total of 5 applications of LANNATE®LV per crop.

Do not make more than two applications to corn prior to tassel push. Make one application when corn is at 1-2 leaf stage for control of early season pests; make a second application, if needed, 5-7 days later.

For Soybeans:

Do not apply LANNATE® LV within 14 days of harvest in soybeans.

Do not apply more than 1.35 pounds of methomyl (4.5 pints of LANNATE® LV) per acre per growing season.

Do not make more than a total of 3 applications of LANNATE®LV per crop.
